Education

California State University – Long Beach (CSULB), Long Beach, CA Expected May 2028
B.S. in Computer Science
Honors: Dean's List (Spring 2025), President's Honor List (Fall 2025)
Relevant Coursework: Data Structures, Algorithms, Object-Oriented Design, Software Engineering, Computer Architecture, Discrete Structures, Operating Systems

Experience

Software Developer Intern | Nuevo Hive LLC May 2026 – Present
- Collaborate with cross-disciplinary teammates to design and build full-stack features for a distributed vending operations platform using Python, FastAPI, Docker, and Figma, working in an agile environment to deliver high-quality software.
- Design and implement scalable backend logic and user-facing functionality for customer refund workflows, improving reliability and ease of use for day-to-day operations.
- Test, debug, and refine platform features across the stack, applying object-oriented design and data structure fundamentals to resolve issues and improve system reliability.

Board Member and Graphic Designer | Women in Computing, CSULB May 2025 – Present
- Convey technical initiatives and event concepts to both technical and non-technical audiences through visual content and promotional materials, strengthening campus engagement.

STEM Outreach Mentor | Women in Computing, CSULB September 2024
- Mentored K–12 students by introducing fundamental programming concepts and computer science fundamentals through hands-on, collaborative coding activities.

Projects

Student Mart – CSULB Marketplace | React, TypeScript, Next.js, Supabase, Vercel | GitHub
- Designed and built a scalable, full-stack marketplace web application enabling students to buy, sell, and browse items, with a database schema built for secure, fault-tolerant transactions.
- Implemented user authentication, listing management, image uploads, and real-time distributed database interactions through Supabase, delivering a responsive, easy-to-use experience.
- Deployed the application on Vercel, iterating on the service to support a growing, multi-user customer base.

Student Success Risk Prediction Pipeline | Python, Pandas, NumPy, Scikit-learn | GitHub
- Built an end-to-end machine learning pipeline to run predictions on student success risk, engineering features and preparing reliable training and testing datasets.
- Implemented data validation, cleaning, and transformation workflows using Pandas and NumPy to improve data quality and model input reliability.
- Trained and evaluated predictive models with Scikit-learn to analyze factors associated with dropout risk, applying complexity- and optimization-driven feature selection.

TinyTasks – BeachHacks 9.0 | React, TypeScript, Tailwind CSS, Vite, FastAPI, Gemini, Twilio | GitHub
- Built an AI-powered, multi-tiered productivity assistant that generates personalized micro-steps using Gemini and FastAPI in an agile, hackathon-speed environment.
- Integrated Fetch.ai uAgents, MongoDB Atlas, and Twilio to enable distributed, agent-based workflows, persistent task management, and real-time WhatsApp messaging.
- Developed a responsive React frontend communicating with backend APIs to deliver AI-generated recommendations, prioritizing usability under ambiguous, evolving requirements.

Technical Skills

Languages: Python, JavaScript, TypeScript, C++, HTML, CSS
Frameworks & Libraries: React, FastAPI, Tailwind CSS
Databases & Platforms: Supabase, Vercel
Tools: Git, Docker, Figma, VS Code
